

ABSTRACT

A zipper with a smooth pull function comprises a zipper body, a flexible element and a puller. Wherein the zipper body includes a top plate having a leveling portion formed at one side thereof and a bottom
5 plate having a smooth portion formed at one side thereof. The puller and the flexible element are connected on the top plate of the zipper body. When using the puller to move the zipper body along a plastic-steel zipper chain, the level portion and the smooth portion are contacted to the zipper chain first for providing a level and a smooth
10 function to smoothly pull the zipper along the zipper chain.
